

During an emergency such as a tsunami, or something related to a major group of boats, people will need to find a place that is high up where the tsunami won't hit them, and in the case of the boats, they will need to find a place to park the boats/ rescue them from the boat, and find accommodation for them, in case of a sea emergency. The group responsible for this is:

- The Coast Guard

The Coast Guard will use the Glohaven Emergency Management System to provide:

- Boat parking locations in case of sea emergency
- Accommodations for people involved in a sea emergency
- Areas people can evacuate due to a Tsunami
